Description			
Do we still want to make a fingerprint recognition test after ingestion of the fingerprint for early detection of ambivalent fingerprints (admin feedback)? Or is this obsolete with the solution of the excerpts for later thorough analysis?

Could be still worth implementing.

I'd like to have a numeric content field named 'uniqueness', which will be computed by dividing the match score after ingestion by the match score before ingesting provided that there is a false positive, pointing to a different creation. If the first can't be found (score == 0), the value will be 100.

I'll add this field. This ticket is now about the implementation of the test.
