Description

While implementing the concept of [Specification#Foreign-objects](#), some problems showed up which we need to address.

Just to remember:

- Foreign artist
 - used in members, contributions
 - fields: name, email
- Foreign creation
 - used in tracks or originals
 - fields: artist, title

Issues:

- Note: Foreign creations don't have a release date
 - so we cannot do any filtering, like for originals: showing only those creations with an earlier release date
- Question: How to handle foreign artists with same email?
 - if several web user specify a foreign artist (contributor or member) with the same email, one could assume, that they refer to the same party
 - So we could append the artist to the same party
 - But then all those web users would be able to change the email for all others (as the email is saved in the party and it's the same entity)
 - Do we want that or do we need to have several parties with the same email?
- Problem: Unknown group for artists of foreign creations
 - Currently, the attribute "group" of artists is a boolean field
 - This field is used for filtering/validation of selection lists (e.g. only solo artists for contributions or members)
 - Foreign creations create artists without knowledge, if it is a group or not (defaults to solo right now)
 - We could change the field type of "group" to selection (group, solo, unknown)
 - Would need time, as this is very basic and used a lot
 - Those artists would then either not be selectable for others, which makes them kind of individual only objects
 - Or it would be selectable for both types, which could result in incorrect data sets
- Note/Problem: Adding artists, created via foreign creations, as members require email
 - Right now, if someone adds a foreign artist X, which was created via a foreign creation, e.g. as a member of artist Y
 - they are not allowed to edit member X (as there is no ajax request for edit permissions)
 - they are able to save the artist Y
 - The next time, they edit the artist Y
 - they are able to edit the member X (as the server checked the edit permission and told the gui, it is editable)
 - they are not able to save the artist Y, as the email needs to be specified (as no email was provided for foreign creation artists)
 - so they need to provide the email then
 - We might introduce those ajax calls to enhance the gui (if there's enough time)
 - But do we want that behaviour, that the email needs to be provided for **added** artists?
- Problem: Who is allowed to edit foreign artists?
 - When a foreign artist X is created, we track the creator
 - If it's a member of artist Y / contributor of a creation of artist Y, I assume, all administrators of artist X should be allowed to edit member / contributor X?
 - This is not straight forward, as the entity creator is the party of the current **web user** and right now, there's no memory of the object for which the foreign object was created in the first place
 - So could we just say, all members are allowed to edit?
 - This entry is selectable by all other web users, so this would mean, that anyone might edit this artist Y, if added as member / contributor.
 - This also means, that all foreign emails might be leaked (DSGVO, etc).
 - But if it's a valid member of more than one artist, why should the artist administrators of the other artists not be able to edit

(which implies name and email)

- But then again, one artist administrator could change the name/email for all others, which might irritate those others
- I'm not sure, what would be best here

History

#1 - 11/07/2018 01:55 PM - Thomas Mielke

Concerning "Question: How to handle foreign artists with same email?":

How about making parts of the email address unreadable?:

thomas.mielke@c3s.cc -> tho****lke@c*s.cc

mielket@gmx.de -> mi*et@g*x.de

This way, the email address would become unusable for dataminers

- Status changed from Neu to Erledigt

- % Done changed from 0 to 100

- Note: Foreign creations don't have a release date

Ok

- Question: How to handle foreign artists with same email?

Duplicates

- Problem: Unknown group for artists of foreign creations

Make group mandatory

- Note/Problem: Adding artists, created via foreign creations, as members require email

Duplicate + Ajax Request for edit permission

- Problem: Who is allowed to edit foreign artists?

Duplicats only! Deduplication only on claiming. Email must be provided on adding = creation of a duplicate. Duplicates must reference the source to ease deduplication and to be able to easily show only one entry of all duplicats in add list.
