

collecting_society - Konzept #850

Can we drop the relation between contributions and roles?

03/13/2019 11:00 PM - Alexander Blum

Description			
The CreationContributionRole is the field for tracking the instrument of contributions (composition/performance). Would it be enough to track the general "instrument" relation between a creation and an artist? This would mean, that we cannot distinguish anymore, if someone composed the guitar part and/or performed it, but it would definitely reduce the complexity of the gui. What would be the usecase, if that kind of distinctions are necessary?

no, it is not possible to drop this information, as the distribution of money depends on it.

to be more precise, it's not important to know which instrument someone composed for, it would be totally sufficient to know who composed or wrote lyrics (even if it's multiple people).

for the interpretation, theoretically it's also not pressing to know the exact instrument, but it might actually become important, e.g., if only certain instrument tracks were used in a remix.

so the distinction between composition and performance is of absolute importance. the connection to instruments is only of relevance for performance rights.

if you suggest to leave out the *instruments* just for the next testing phase, that would be doable. but sooner or later we'd have to add them back again.
